Portfolio: portfolio-zeta-cyan-13.vercel.app/en

SUMMARY

Front-End Developer with 4 years of experience building production web applications with ReactJS and TypeScript. Experienced in API integration, state management (Zustand, Redux Toolkit, React Query) and building reusable components with clean code and a clear architecture. Works closely with Designers (Figma), Backend and DevOps in Agile/Scrum teams. Comfortable building multi-step business flows, real-time status updates and large-volume data handling. Good reading comprehension of English technical documentation.

SKILLS

- **Languages & Frameworks:** TypeScript, JavaScript (ES6+), ReactJS (18/19), Next.js (App Router, SSR), HTML5, CSS3
- **Rendering:** CSR (React SPA with Vite), SSR (Next.js App Router), code splitting, lazy loading
- **State & Data:** Zustand, Redux Toolkit, React Query, RESTful APIs (Axios), WebSockets (Pusher), TanStack Router, TanStack Virtual
- **UI & Styling:** Tailwind CSS, SCSS Modules, styled-components, Shopify Polaris / Polaris Viz UI component library, Responsive Design
- **Design:** Translating Figma designs into UI
- **Forms & i18n:** React Hook Form, Formik, Yup, i18next, next-intl
- **Architecture & Clean Code:** Custom hooks, Design patterns (Compound Components, Container/Presentational, Singleton), Component-Driven Development, Feature-Driven Architecture, Layered Architecture, Turborepo monorepo, ESLint, Prettier, TypeScript (strict)
- **Testing & Performance:** Vitest, Lighthouse, Chrome DevTools, web-vitals, Core Web Vitals
- **DevOps & Workflow:** Git, GitLab CI/CD, Docker, Jira, Confluence, Scrum
- **AI Tools:** GitHub Copilot, Claude

WORK EXPERIENCE

FireGroup - Front-End Developer (Fresher - Middle) | 10/2022 - 08/2026

Project: Oneloyalty - Shopify Embedded App, Loyalty & Rewards suite | 06/2024 - 08/2026
Role: Junior - Middle Front-End Developer | Team of 9 (2 FE)
Tech stack: ReactJS 18, TypeScript (strict), Zustand, React Query, React Hook Form, Yup, Pusher, i18next, Vite, Tailwind CSS, Shopify Polaris, Turborepo
Link: apps.shopify.com/oneloyalty

- Developed admin UI from Figma designs, integrated RESTful APIs with the Backend using React Query and managed client-side state with Zustand.
- Merged 2 separate repositories (Admin, Extensions) into a Turborepo monorepo under senior guidance: consolidated duplicated UI components into a shared packages/ui package and moved features from Feature-Driven to Layered Architecture to eliminate cross-imports; delivered on schedule.
- Brought the dashboard CLS below 0.1 by reserving layout space for asynchronously loaded sections, helping the app keep its "Built for Shopify" badge for better App Store ranking and recommendations.
- Built a shared packages/i18n package exposing a single i18next instance, preventing duplicate initialization errors and standardizing i18n usage across the team.
- Worked with DevOps and owned the FE deployment pipeline on GitLab CI/CD: fixed Node version mismatches and removed unnecessary dependency installation steps, keeping FE releases smooth.

- Introduced GitHub Copilot into the team workflow with a set of rules and instructions to control the quality of AI-generated code.

Project: Swift - Shopify Embedded App, SEO & Speed optimization suite | 10/2022 - 06/2024
Role: Fresher - Junior Front-End Developer | Team of 9 (2 FE)
Tech stack: ReactJS 18, TypeScript (strict), Redux Toolkit, React Query, Formik, Yup, Pusher, i18next, Vite, Shopify Polaris
Link: apps.shopify.com/swift

- Co-migrated the entire codebase from JavaScript to TypeScript and restructured it into a Feature-Driven Architecture under senior guidance; applied ESLint rules to unify code style across the team.
- Built a real-time progress UI (via Pusher) for multi-step speed optimization tasks (JS/CSS minification, image lazy-loading, HTML cleanup), showing per-step status and success/failure results.
- Reduced initial page load time by about 20% through code splitting and converting images to WebP.

PERSONAL PROJECTS

SafeBulk - Shopify Bulk Product Editor | 07/2026 - Present
Role: Sole Frontend Developer (team of 1 FE, 1 BE)
Tech stack: ReactJS 19, TypeScript (strict), TanStack Router, React Query, Zustand, Docker
Link: apps.shopify.com/safebulk-editor | github.com/nguyenthanhdat22012001/safe-bulk-shopify | Demo: youtu.be/uaKi8VwIrKE

- Co-founded the product with a Backend engineer: conducted market research, wrote business logic documentation for each feature and prototyped the UI with Figma AI.
- Built the entire frontend independently and aligned API contracts with the Backend; launched the MVP in about 1.5 months.
- Built multi-step business flows and large-volume product data handling: Bulk Edit Wizard, CSV import/export, change history log, plan gating.
- Containerized the FE build step with a Dockerfile.

Portfolio Website - Next.js
Tech stack: Next.js 16 (App Router, SSR), TypeScript, Zustand, next-intl, React Three Fiber, GSAP, Velite (MDX), Vitest
Link: portfolio-zeta-cyan-13.vercel.app/en | github.com/nguyenthanhdat22012001/Portfolio

- Built a bilingual (EN/VI) portfolio with Next.js App Router (SSR) and next-intl, featuring scroll-driven 3D scenes and GSAP animations.
- Set performance budgets enforced in CI (initial JS < 150 KB gzipped, CLS ≤ 0.1, Lighthouse CI) by lazy-loading heavy 3D and animation chunks; added unit tests with Vitest.
- Ensured SEO and accessibility: hreflang, sitemap, JSON-LD, auto-generated OpenGraph images, prefers-reduced-motion support and static fallbacks.

EDUCATION

FPT Polytechnic College - Website Design | 09/2020 - 01/2022
College Diploma, graduated with Distinction, GPA 8.1/10

LANGUAGES

- **English:** Good reading comprehension of technical documentation
