SUMMARY

Front-End Engineer with ~4 years of experience building production web applications with React and TypeScript, and quick to adapt to new frameworks and domains. Strong in web performance and maintainable frontend architecture, from improving Core Web Vitals to contributing to TypeScript and monorepo migrations. Work closely with designers and backend engineers in Agile teams, and use AI tools daily to ship faster, including a full product MVP in ~1.5 months.

TECHNICAL SKILLS

Languages & core	TypeScript, JavaScript (ES6+), React (18/19), HTML5, CSS3
Architecture	Turborepo monorepo, Layered Architecture, Feature-Driven Architecture, Component-Driven Development
State & data	React Query, TanStack Router, TanStack Virtual, Zustand, Redux Toolkit, RESTful APIs (Axios), WebSockets (Pusher)
Forms & i18n	React Hook Form, Formik, Yup, i18next
UI & styling	Tailwind CSS, SCSS Modules, styled-components, Shopify Polaris / Polaris Viz, Responsive Design, Figma
Code quality & testing	ESLint, Prettier, TypeScript (strict), Vitest
Performance & build	Vite, code splitting, lazy loading, Core Web Vitals (LCP, CLS, FCP)
DevOps & workflow	Git, GitLab CI/CD (pipeline troubleshooting), Docker (FE build images), Jira, Confluence, Scrum
AI tools	GitHub Copilot, Claude (project rules, AI-assisted refactoring & debugging)
Familiar with	Next.js (App Router, SSR), SEO, accessibility

EXPERIENCE

FireGroup — Middle Front-End Engineer

Oct 2022 — Aug 2026 · Ho Chi Minh

Oneloyalty — Loyalty & Rewards Suite

Jun 2024 — Aug 2026

Shopify embedded app · Team of 9 (2 FE) · apps.shopify.com/oneloyalty

Tech: React 18, TypeScript (strict), Zustand, React Query, React Hook Form + Yup, Pusher, i18next, Vite, Tailwind CSS, Turborepo

- Implemented a senior-led migration of 2 separate repos (Admin, Extensions) into a Turborepo monorepo: extracted duplicated UI components into a shared `packages/ui` and moved features from Feature-Driven to Layered Architecture to eliminate cross-feature imports; shipped on schedule.
- Brought dashboard CLS to ≤ 0.1 by reserving layout space (height/min-height) for async sections, retaining the "Built for Shopify" badge that boosts App Store ranking and recommendations.
- Built a shared `packages/i18n` exposing a single i18next instance, preventing duplicate-initialization bugs and standardizing i18n usage across the team.
- Owned the FE deployment pipeline on GitLab CI/CD: fixed Node version mismatches and removed unnecessary Extensions installs from the Admin job, unblocking FE releases.
- Integrated GitHub Copilot into the team workflow with project rules and instructions to keep AI-generated code consistent, speeding up task delivery, debugging and refactoring.

Swift — SEO & Speed Suite

Oct 2022 — Jun 2024

Shopify embedded app · Team of 9 (2 FE) · apps.shopify.com/swift

Tech: React 18, TypeScript (strict), Redux Toolkit, React Query, Formik + Yup, Pusher, i18next, Vite

- Co-implemented a senior-led migration of the entire codebase from JavaScript to TypeScript and into a Feature-Driven Architecture, catching type errors at compile time and enforcing ESLint rules to keep code style consistent across the team.
- Built a real-time progress UI (via Pusher) for speed optimizations applied to merchants' storefront themes (JS/CSS minification, image lazy-loading, HTML cleanup), showing live step-by-step status and success/failure results.
- Built UIs for standalone SEO tools: alt-text automation, meta tag editing, structured snippets, and sitemap management.
- Cut initial page load by **~20%** via code-splitting and converting images to optimized WebP.

PERSONAL PROJECTS

SafeBulk — Shopify Bulk Product Editor

Jul 2026 — Present

Side project, team: 1 FE, 1 BE · Sole Frontend Developer

App: apps.shopify.com/safebulk-editor

GitHub: github.com/nguyenthanhdat22012001/safe-bulk-shopify

Demo: youtu.be/uaKi8VwlrKE

Tech: React 19, TypeScript (strict), TanStack Router, React Query, Zustand, Docker

- Co-founded the product with a BE engineer: validated the Shopify market with AI-assisted research, wrote detailed business-logic specs per feature, and prototyped the UI in Figma AI.
- Built the entire frontend and aligned API contracts with the backend, shipping the MVP in **~1.5 months** with an AI-first workflow: Bulk Edit Wizard, CSV import/export, history log, plan gating.
- Containerized the FE build stage with a Dockerfile.

Portfolio Website

Personal project

Live: portfolio-zeta-cyan-13.vercel.app

GitHub: github.com/nguyenthanhdat22012001/Portfolio

Tech: Next.js 16 (App Router), TypeScript, React Three Fiber, GSAP, Zustand, next-intl, Vite (MDX)

- Built a bilingual (EN/VI) portfolio with Next.js App Router (SSR) and next-intl, featuring scroll-driven 3D scenes and GSAP animations.
- Enforced performance budgets in CI (initial JS < **150 KB gzipped**, **CLS ≤ 0.1**, Lighthouse CI) by lazy-loading heavy 3D and animation chunks; added Vitest unit tests.
- Covered SEO and accessibility: hreflang, sitemap, JSON-LD, generated OG images, prefers-reduced-motion support, and static fallbacks.

EDUCATION

FPT Polytechnic College

09/2020 — 01/2022

Website Design. Graduated with Honors, GPA 8.1/10.

LANGUAGES

English: Basic — able to read technical documentation
